

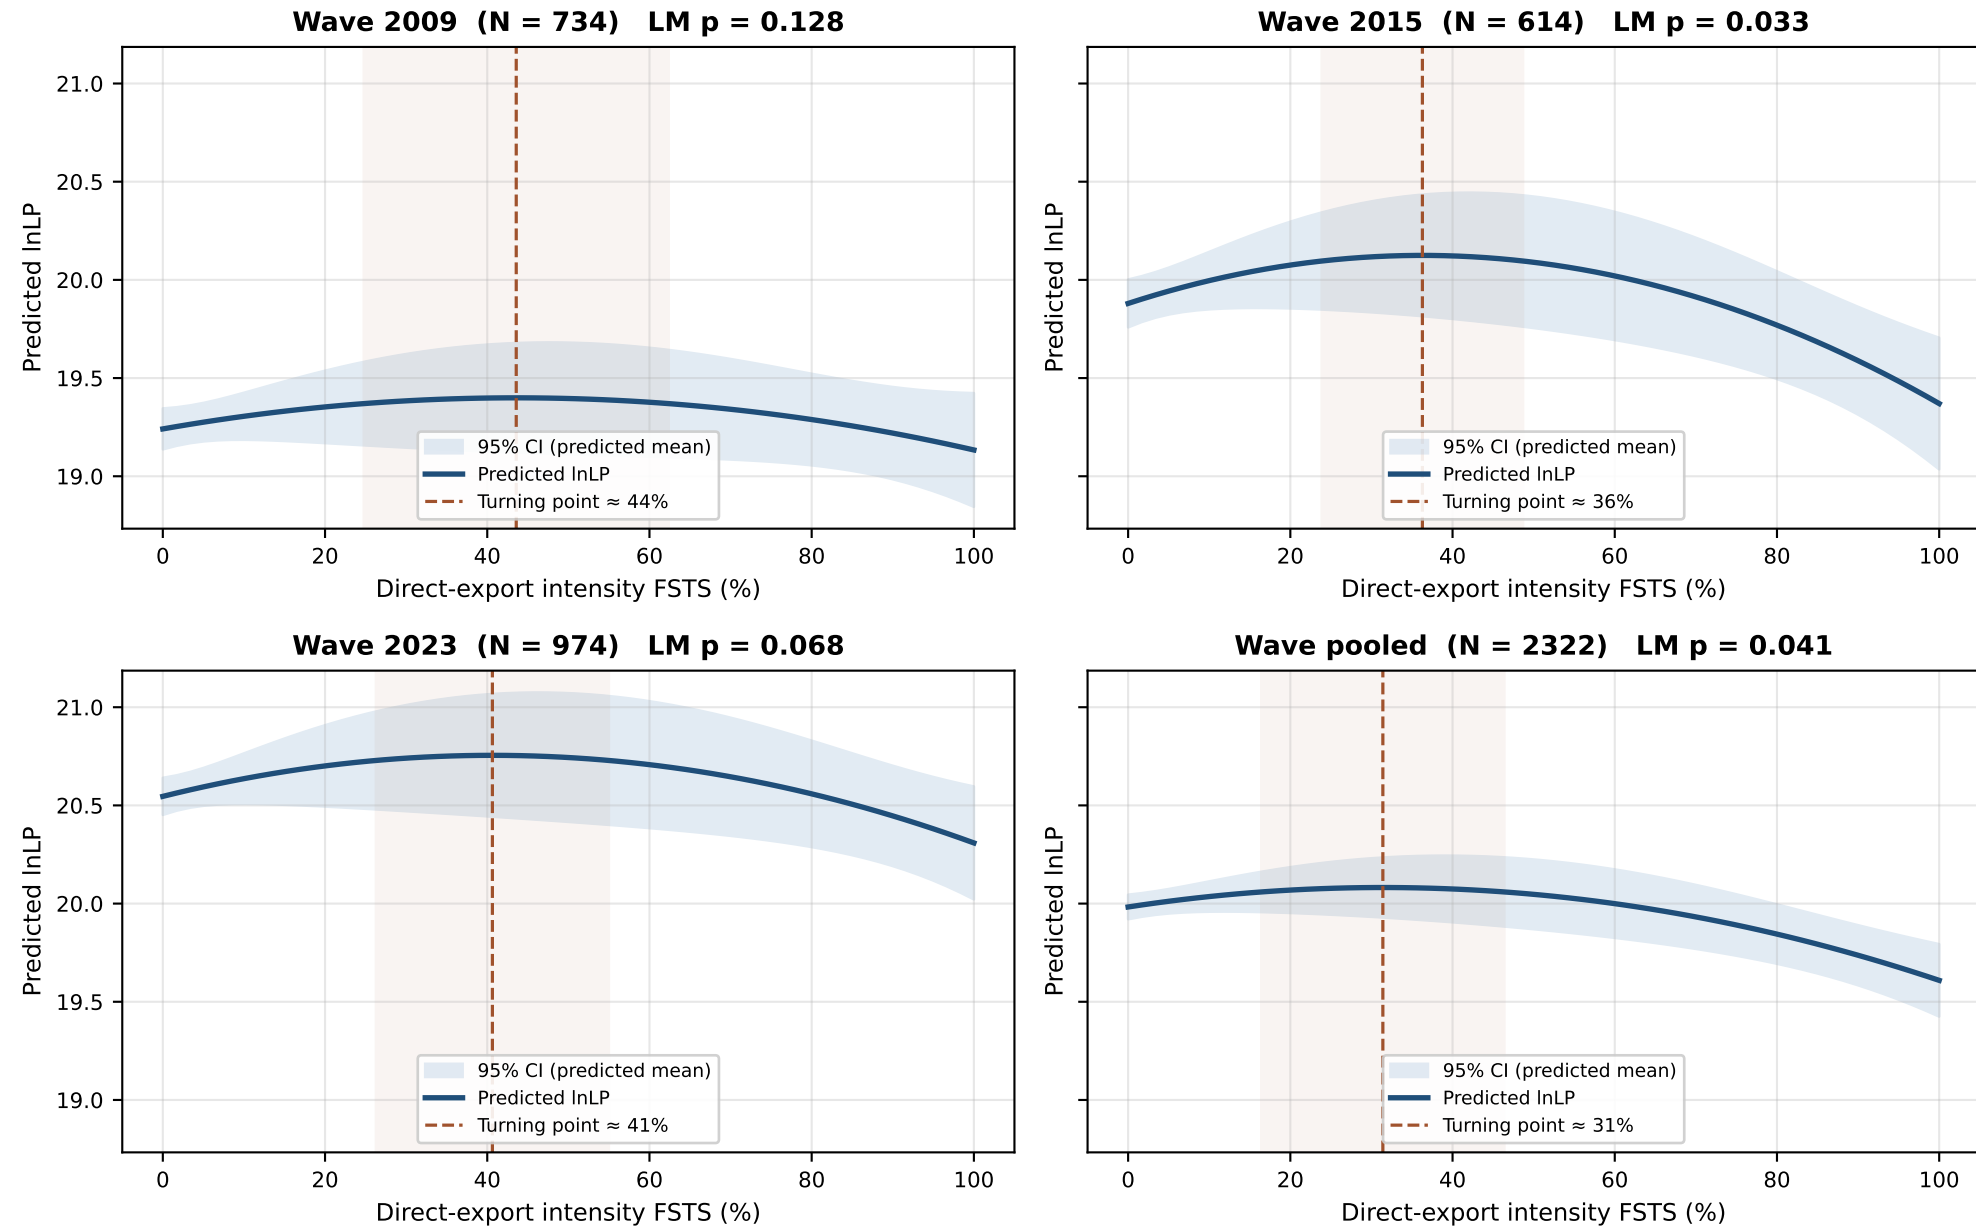

Figure 2. Predicted InLP across direct-export intensity, by Vietnam WBES wave

Notes. OLS-HC1 fitted curve with controls (lnEmp, FirmAge, ForeignOwned), sector FE, and (pooled panel) wave FE held at within-sample means; shaded band is the 95% CI for the predicted mean. Turning point: $-\beta(\text{FSTS_c})/(2 \beta(\text{FSTS_c}^2))$; LM p is the Lind & Mehlum (2010) U-test p-value.
